

Systematic Wood Protection by Wolman

Vacuum pressure impregnation

Wolmanit® CX

Liquid wood protection concentrate, suitable for wood in gardening and landscaping, for playground equipment, posts, palisades, fences and decking

Wolsit® KD

For preventive protection of timber (without ground contact) against fungi and insects

Protection of wood-based materials

Xyligen® 30F / Wolsit® F-15T

Preventive protection against wood-destroying fungi for indoor use (Wolsit® F-15T) and approved for use in covered outdoor areas/scaffolding (Xyligen® 30F)

Wolsit® T

Preventive protection of engineered wood against wood-destroying insects, including termites, for indoor use

Anti-Sapstain

Wolsin®/Sinesto®

Temporary protection against mould and other wood-discoloring fungi; especially suitable for freshly cut timber, during drying, storage or transport

Treatment of construction timber

Wolsit® EC

Protection against fungi and insects with additional protection against mould and discoloring during the drying phase; for indoor and outdoor use (without ground contact)

Wolmanit® CX
Quality Treatment
and Durability
to Last a Lifetime

Wolmanit® CX – A Unique, Highly Efficient Combination of Active Ingredients

Wolman products for vacuum pressure impregnation

Modern wood protection places high demands on research and technology. Today, preservatives must be effective and at the same time comply with the legal requirements for environmental, health and occupational safety.

Wolmanit® CX or Wolsit® KD products – the right solution for every application. The innovative Wolman preservatives are the basis for durable wood protection. Water-repellent additives and paints turn standard wood products into high-quality refined premium products.

Congratulations on purchasing a quality timber product treated with Wolmanit® CX

Wood is a natural, sustainable building material that is popular due to its strength, and versatility. When used outdoors, however, timber is exposed to changing weather conditions and insect attack as well as fungal decay. This can harm the timber over time. State-of-the-art Wolmanit® CX wood preservative by Wolman makes an important contribution to maintaining the natural beauty of timber and extends the service life of the treated timber product.

30 years+ proven practical experience

Wolmanit® CX was introduced over 30 years ago and has been successfully used in many fold outdoor applications around the globe. It is used for outdoor applications requiring the protection of timber – in-ground or above ground: e.g. for decking, fences, playground equipment, car ports, cladding.

- 30 years+ proven practical experience
- designed for high performance applications
- independent testing confirms best penetration and fixation
- environmentally friendly, extends the service life of timber and is easy to use
- safe: suitable for playground equipment

Approved by leading quality schemes across Europe

Used in high performance applications

Wooden roller-coasters are superb examples of timber typically preserved with Wolmanit® CX – whenever it really counts!

Safe: suitable for playground equipment

Wolmanit® CX meets national requirements and European laws. It can safely be used even for sensitive applications such as playground equipment.

Comprehensive, independent tests

Wolmanit® CX has undergone extensive independent lab and field tests. Independent quality audits e.g. by RI.SE (Research Institute of Sweden), confirm that Wolmanit® CX achieves the best penetration levels in timber – a major criterion for achieving the required durability. Timber is protected only where the preservative is present – therefore the penetration is crucial.

Favourable environmental profile

With the quality impregnation by Wolmanit® CX, wood is not only permanently protected, but an efficient and sustainable solution is achieved, especially for domestic wood species – and that with safe and easy handling at the same time.

Additional protection

When wood is further processed, unprotected wood areas are exposed at interfaces and holes. In order to preserve the protection of the wood and the continuous coloring of the impregnated wood, newly created cut surfaces must be coated with a proprietary cut-end preservative.
